## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-22 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Chem Abstract 137: 233008.

The reference discloses the lab.-scale optimization and pilot plant scale synthesis of a poly(arylene ether ketone) in that the polymer produced has the desired properties of low MW and the polydispersity of 2.37-2.39, and well defined controlled end groups, using a one step solution polymerization of 4,4'-difluorobenzophenone, bisphenol A, and 4-tert-butylphenol.

Note that the amount of tBP can be varied as desired to get the ter-butylphenol terminus, and the variation of the ratio of DFBP to BPA controls the MW of the obtained

polymer, and the replacement of DFBP with dichlorobenzophenone as a cost-saving measure, the effect of temperature, and the effect of the concentration of the reactants.

The disclosure of the reference differs from the instant claims in that it does not disclose the general formula of claim 1 with so many variations. However, it does disclose specific reactants under the same conditions to form the same or similar products. In view of this similarity, it would appear to be inherent that a product of the claimed formula could be prepared following the teachings of the reference. See *In re Best*, 195 USPQ 430, 433 (CCPA 1977).
